

Giulio Jensen Ungaretti

Software and AI engineering leader with 13+ years across pharmaceutical R&D, enterprise platforms and scientific computing. I take a people-centred approach to leading cross-functional teams, setting product goals and technical direction while staying close to delivery. My experience combines production AI at Novo Nordisk, enterprise engineering enablement at LEGO and strategic AI advisory at Microsoft.

EXPERIENCE

- **Software, Development Tools and AI Lead | Europe North** — *Microsoft* (2025–2026)
Guide major Nordic enterprises on generative-AI adoption across the software development lifecycle, combining strategic advisory with practical engineering experience. Demonstrate AI-assisted workflows and testing approaches inspired by formal verification.
- **Principal Software Engineer** — *Novo Nordisk* (2023–2025)
Led a cross-functional team of around 20 delivering a modern lab platform and a new agentic research application. Owned product vision, technical direction, migration strategy and delivery from concept to production. The team migrated 4 TB of historical data into a platform serving nearly 2,000 users. Built on Azure and Azure AI Foundry, the AI application combined retrieval-augmented generation (RAG), data processing and a custom UI integrated with an existing application to support experiment queries and scientific writing.
- **Head of Software (Contract)** — *ATLANT3D* (2023)
Established and led a four-person software and controls team for an advanced materials startup. Built the foundations for automation, control software and IT/OT data flows, connecting hardware and software engineering.
- **Lead Software & Data Engineer** — *LEGO Systems* (2022–2023)
Led an eight-person team enabling LEGO's enterprise-wide data mesh strategy. Drove platform architecture, engineering enablement and adoption of shared engineering practices across the organisation. (*Go, Databricks, Python, Scala*)
- **Senior Software Engineer** — *Microsoft Quantum* (2019–2022)
Led a globally distributed team of five building the data platform for Microsoft's quantum-computing programme, integrating data sources and IIoT instruments across research labs worldwide. Championed diversity and inclusion initiatives across the European time zone. (*Azure, Go, C#, Python/Spark*)

- **CTO & Co-founder** — *Amie.ai* (2017–2019)
Co-founded Amie.ai and took a graph-based notebook for data scientists and researchers from concept to production. Built the supporting data pipelines and internal tooling. (*TypeScript, Elm, Go, PostgreSQL, AWS*)
- **Senior Software Engineer** — *Microsoft Research* (2015–2017)
Created and led development of QCoDeS, an open-source platform for experiment control and real-time monitoring in quantum laboratories in Copenhagen, Delft and Sydney. (*Python, TypeScript, Spark, F#*)
- **Software & Data Engineer** — *etilbudsavis* (2013–2015)
Delivered machine-learning models, NLP tooling, geospatial analysis and data pipelines for Denmark's leading retail-offers platform. (*Python, Go, PostgreSQL, Spark*)
- **Research Assistant** — *Centre for Quantum Devices* (2014)
Developed numerical methods for X-ray signal analysis and automated image processing for nanowire experiments. Taught computation and data management. (*Python, F#*)

EDUCATION

- **MSc, University of Copenhagen (2012–2014)** — Thesis: III–V Semiconductors
Nanowires Growth and Characterisation. Built software to sort thousands of microscope images, measure millions of particles and process high-speed X-ray recordings for nanowire research.
- **BSc, Ca' Foscari University of Venice (2008–2012)** — Thesis: Sunlight Radiation
Downshifting in Cover Glass Doped with Copper by Ion Exchange. Contributed to experimental design and data analysis using optical spectroscopy and X-ray absorption.

COMMUNITY

- Manager and organiser, PyData Copenhagen (2014–2022). Grew it into the largest PyData community in the Nordics and taught workshops.
